

Static Mixers are highly-engineered motionless mixing devices that allow for the inline continuous blending of fluids within a pipeline. With no moving parts, static mixers utilize the energy of the flow stream to generate consistent, cost-effective, and reliable mixing.

- Polypropylene is also good for the mixing of wastewater with the Other Dosing chemicals.
- PP Static mixer used where low Pressure and Low Temperature mixing is done.
- PP Static mixer is economic solution compare to the other material and widely used where mixing is done at low pressure and Ambient Temperature.
